

About Owens Solar

Company Background

J & J Owens Electric, Inc. was established in 1964, headquartered in Burlingame with offices in San Mateo, California. We specialize in providing electrical work and energy-savings solutions to residential, commercial and industrial facilities worldwide. With over 40 years of experience in the electrical and energy fields, we have the knowledge and level of expertise to effectively analyze the current state of a company's or residence's energy system, and to design and implement the Energy Solution that best meet its needs. We are committed to professionalism, total quality of our products and services, and most importantly to our customers' overall satisfaction. Always at the forefront of technology, we installed some of the very first Solar Electric and Water Heating systems in the Bay Area back in the 70's and 80's. Solar was recently added to the name of the company to reinforce our mission of efficiently utilizing our natural resources and harnessing power from the Sun. Over the years people have relied on our quick response time, professionalism, fair pricing and follow-up to solve their electrical and solar energy needs.

Owens Electric & Solar was selected as a professional installer for The Home Depot - BP Solar Home Solutions Program. For more information [click here](#)

We would like the opportunity to earn your business also.

Owens Electric & Solar - We Give You the Power to Save!

Our Experience

Our trained and certified Team of Energy Consultants are professional electricians or engineers experienced in gathering the important data our company needs to accurately assess the effectiveness of possible Energy Solutions. As an integral focus, we perform an extremely detailed analysis or energy audit throughout the whole facility, reviewing many variables others may overlook. By gathering relevant information about our client's site, electrical system, main equipment operations, electrical billing issues and history, and goals, a comprehensive report is submitted to our central staff for review. After a complete evaluation of the site and facility's data, our energy consultants design possible technical and financially feasible Energy Solutions to optimize the client's energy objectives.

Mission Statement

Owens Electric & Solar is totally committed to the sensible and effective use of our planet's limited energy resources for the essential living and operation of individuals and organizations. The focus on conservation, alternative generation, and efficient operation of the electrical energy has been adopted by the organization as the main mission. We believe in total customer satisfaction - total honesty, good communication and delivering what we promise. With the goal of maximization of clients' profits, while minimizing expenses will be what we strive for.

Values

Integrity and Honesty, Communication and Professionalism

Owens Electric & Solar strives to align itself with like-minded companies. We have excellent business and working relationships with leading manufacturers and distributors of electrical and solar energy products and service providers.
