

## Testimonials

### SolarCustomer Reviews

I received quotes from numerous companies. I selected Owens Electric because they are a big player and presented themselves professionally. They came in and did an amazing job for me. I can't say enough good things about them. They were very professional and straightforward. I had no issues with them whatsoever. The deciding factor for me was that I wanted a company with great service and support behind a system with a lifespan of 4 decades. I wanted a big company that I knew would be around. I was very pleased with them throughout the process and I am very happy with the solar system.

Owens Electric & Solar did a very professional job for me. They performed admirably jumping through all the hoops that the City of Hillsborough placed in front of them. They were very reliable and flexible in accommodating to my needs and city codes. The technicians were also easy going and great to work with. I've recommended them several times.

Owens Electric & Solar did a fine job. I would recommend them to anybody. They installed solar systems on two houses for me and they did electrical work on a third. Their crew was great. They were timely and got the job done when they said they would. They were also on site for the inspections, so they could deal with any issues immediately. They were great about accommodating to my wishes and taking my input on the second solar system installation. Their quotes were quite a bit lower than the competition and the costs for the bidding process and inspections are incorporated into the cost of the job. I really appreciated that they were ready to answer questions or get someone who could. And they cleaned up any mess they made. I can't say enough about their service.
